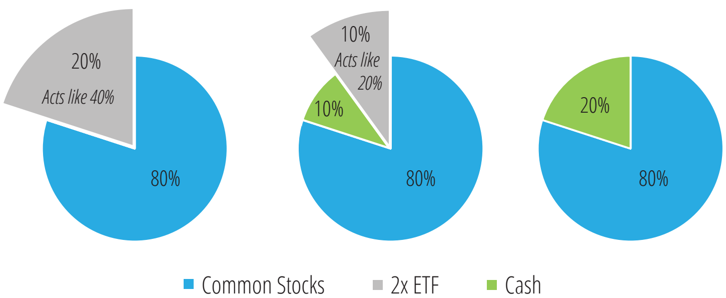
A Smarter Way to Invest

Data as of 07/31/20

Small Cap

Benchmark: S&P 600 Small Cap Index

Bullish *120% Total Equity Exposure* | **Mixed Signals** *100% Total Equity Exposure* | **Bearish** *80% Total Equity Exposure*



The Small Cap model aims to generate returns that mirror the S&P 600 Small Cap Index, primarily from capital appreciation. The model consists of two primary components; one sleeve of 80% common stocks and the remaining 20% that is rotated between a leveraged ETF or cash position. Alpha is generated by either selecting securities that outperform the benchmark or by over or under-exposure to the benchmark with the rotating ETF/ cash position.

The individual securities within this model are selected based on a momentum strategy. We select common stocks from the S&P 600 universe, split them into the eleven GICS sectors, and then score and rank them all. The highest scoring stocks within each sector are included in the model and rebalanced semi-annually. Sector weightings are similar to the S&P 600.

The allocation of the ETF/cash position depends on our Alpha and Omega algorithms. When both signals are bullish, this 20% will be fully invested in a double leveraged S&P 600 ETF that will act like 40% and with the 80% common stock, provide the entire model with 120% exposure to the benchmark. When both signals are bearish, this portion will be invested in cash that acts like 0% and provide 80% exposure overall. If the signals are mixed, the 20% will be split evenly between the ETF and cash providing 100% overall exposure to the benchmark.

Risk Statistics

	Small Cap	S&P 600
Max Drawdown	-37.46%	-45.77%
Recovery Time	NA	NA
MAR Ratio	0.18	0.19

There are risks involved with investing, including possible loss of principal.

This material is intended for both educational purposes and to promote interest in the subject matter. It does not address any individual's specific situation and is not to serve as the basis for any investment decision. The material is based on the latest information available to the public and, while deemed accurate, is not guaranteed. Numerical examples, if any, are only illustrative. All dividends and distributions are assumed to be reinvested. Results do not represent actual trading and may not reflect the impact that material economic and market factors may have on the Advisor's decision-making when managing a Client's assets. The investment strategy may be altered over time but return figures presented represent the strategy that was actually implemented during the period reported. Performance shown is hypothetical and was compiled after the end of the period advertised. This does not represent decisions made by the Advisor during the period described but hypothetical backtested performance results as stated are based on using the current discipline applied by ASWTI for its asset management process. Returns are presented net of a 1.00% fee that incorporates A Smarter Way to Invest management, custodial, trading and administrative expenses. Actual client accounts may incur additional advisory fees which would impact the net return figures shown here. For additional information, please contact A Smarter Way to Invest directly.
